## Hand Therapy Room

### Hand Therapy Room

The Hand Therapy Department in Corpus Christi is equipped with the necessary therapeutic equipment needed to return a patient to their optimum functional level and was constructed specifically to allow simultaneous treatment for forearm/upper extremity patients. We offer services involving dynamic/static splinting, as well as modalities involving ultrasound, manual electrical stimulation, high volt, interferential electrical stimulation and pre-mod. Our treatment tables allow for optimum patient comfort while receiving their soft tissue mobilization and joint mobilizations. In addition, the hand clinic has whirlpool services for wound care, as well as a two patient fluidotherapy and a paraffin bath.

### Instructions

To take a 360 degree view of the room, place the mouse on the picture until you see 4 arrows, left click and hold button down. Drag the mouse left, right, up or down to view virtually any part of the room. To zoom in, place the mouse in the center of the picture until you see 2 arrows pointing to the top right and bottom left, left click and hold. To zoom out, place the mouse in the center of the picture until 2 arrows are pointing top left and bottom right, left click and hold. To return to the original view, right click.
